PROGRAM STUDI S1 INFORMATIKA

FAKULTAS INFORMATIKA

INSTITUT TEKNOLOGI TELKOM PURWOKERTO

2026/2027

DASAR TEORI

Pemrograman web menggunakan PHP sebagai bahasa server-side yang bekerja di dalam web server untuk memproses permintaan dari client dan menghasilkan halaman web dinamis. Web server sendiri berfungsi menerima request melalui protokol HTTP/HTTPS dan mengirimkan response berupa halaman HTML. PHP memiliki keunggulan seperti mudah dipelajari, gratis, multiplatform, serta didukung komunitas yang besar, sehingga banyak digunakan dalam pengembangan web. Dalam implementasinya, PHP memiliki berbagai komponen dasar seperti variabel, konstanta, operator, struktur kondisi, perulangan, fungsi, dan array yang digunakan untuk mengolah data dan logika program, serta biasanya dijalankan dalam lingkungan seperti XAMPP yang mengintegrasikan Apache, PHP, dan MySQL untuk memudahkan proses pengembangan aplikasi web.

1.1 Laragon/XAMPP

- **Laragon** adalah aplikasi local server development environment untuk Windows yang ringan, cepat, dan mudah digunakan. Berisi komponen web server (Apache/Nginx), database (MySQL/MariaDB), PHP, dan tools lainnya untuk mengembangkan aplikasi web secara lokal.
- **XAMPP** adalah kepanjangan dari Cross-Platform (X), Apache, MySQL, PHP, dan Perl. Sama seperti Laragon, XAMPP adalah paket software yang memungkinkan komputer berfungsi sebagai web server lokal untuk development dan testing aplikasi web.

2.2 PHP (Hypertext Preprocessor)

PHP adalah bahasa pemrograman server-side scripting yang open source, dirancang khusus untuk pengembangan web. PHP dapat disematkan dalam HTML dan dieksekusi di server untuk menghasilkan halaman web dinamis.

3.3 Composer

Composer adalah tool dependency manager untuk PHP yang memungkinkan developer untuk mengelola library dan package yang dibutuhkan dalam proyek PHP. Composer memudahkan instalasi, update, dan autoloading library pihak ketiga.

Command Terminal yang Bisa Dijalankan:

Command PHP:

1. `php -v` - Menampilkan versi PHP yang terinstall

```
C:\laragon\www
λ php -v
PHP 8.3.30 (cli) (built: Jan 13 2026 22:50:40) (ZTS Visual C++ 2019 x64)
Copyright (c) The PHP Group
Zend Engine v4.3.30, Copyright (c) Zend Technologies

C:\laragon\www
λ composer --version
Composer version 2.9.4 2026-01-22 14:08:50
PHP version 8.3.30 (C:\laragon\bin\php\php-8.3.30-Win32-vs16-x64\php.exe)
Run the "diagnose" command to get more detailed diagnostics output.
```

2. `php -m` - Menampilkan daftar modul/extension PHP yang aktif

```
C:\laragon\www
λ php -m
[PHP Modules]
bcmath
calendar
Core
ctype
curl
date
dom
exif
fileinfo
filter
gd
hash
iconv
intl
json
libxml
mbstring
mysqli
mysqlnd
openssl
pcre
PDO
pdo_mysql
pdo_sqlite
Phar
random
readline
Reflection
session
SimpleXML
sodium
SPL
sqlite3
standard
tokenizer
xml
xmlreader
xmlwriter
xsl
zlib

[Zend Modules]
```

3. `php -i` - Menampilkan konfigurasi PHP (phpinfo)

```
C:\laragon\www
λ php -i
phpinfo()
PHP Version => 8.3.30

System => Windows NT DESKTOP-HR7QLRM 10.0 build 26200 (Windows 11) AMD64
Build Date => Jan 13 2026 22:48:14
Build System => Microsoft Windows Server 2022 Datacenter [10.0.20348]
Build Provider => The PHP Group
```

4. php --ini - Menampilkan lokasi file php.ini yang digunakan

```
C:\laragon\www
λ php --ini
Configuration File (php.ini) Path:
Loaded Configuration File:      C:\laragon\bin\php\php-8.3.30-Win32-vs16-x64\php.ini
Scan for additional .ini files in: (none)
Additional .ini files parsed:    (none)

C:\laragon\www
λ
```

Command Composer:

5. composer --version - Menampilkan versi Composer

```
C:\laragon\www
λ composer --version
Composer version 2.9.4 2026-01-22 14:08:50
PHP version 8.3.30 (C:\laragon\bin\php\php-8.3.30-Win32-vs16-x64\php.exe)
Run the "diagnose" command to get more detailed diagnostics output.

C:\laragon\www
λ
```

6. composer list - Menampilkan daftar semua command Composer

```
C:\laragon\www
λ composer list

Composer version 2.4.1 2022-08-20 11:44:50
```

7. composer diagnose - Mendiagnosa masalah konfigurasi Composer

```
C:\laragon\www
λ composer list

Composer version 2.9.4 2026-01-22 14:08:50

Usage:
  command [options] [arguments]

Options:
  -h, --help                Display help for the given command. When no command is given display help for the list command
  -q, --quiet                Do not output any message
  -V, --version              Display this application version
  --ansi|--no-ansi           Force (or disable) ANSI output
  -n, --no-interaction       Do not ask any interactive question
  --profile                  Display timing and memory usage information
  --no-plugins               Whether to disable plugins
  --no-scripts               Skips the execution of all scripts defined in composer.json file.
  -d, --working-dir=WORKING-DIR If specified, use the given directory as working directory.
                             Present use of the cache
  -v|vv|vvv, --verbose       Increase the verbosity of messages: 1 for normal output, 2 for more verbose output and 3 for debug

Available commands:
  about                      Shows a short information about Composer
  archive                    Creates an archive of this composer package
  audit                      Checks for security vulnerability advisories for installed packages
  browse                     [home] Opens the package's repository URL or homepage in your browser
  bump                       Increases the lower limit of your composer.json requirements to the currently installed versions
  check-platform-reqs        Check that platform requirements are satisfied
  clear-cache                [clearcache] Clears composer's internal package cache
  completion                 Dump the shell completion script
  config                     Sets config options
  create-project              Creates new project from a package into given directory
  depends                    [why] Shows which packages cause the given package to be installed
  diagnose                   Diagnoses the system to identify common errors
  dump-autoload              [dump-autoload] Dumps the autoloader
  exec                       Executes a vendored binary/script
  find                       Discover how to help fund the maintenance of your dependencies
  global                     Allow running commands in the global composer dir ($COMPOSER_HOME)
  help                       Display help for a command
  init                       Creates a basic composer.json file in current directory
  install                    [i] Installs the project dependencies from the composer.lock file if present, or falls back on the composer.json
  licenses                   Shows information about licenses of dependencies
  list                       List commands
  outdated                  Shows a list of installed packages that have updates available, including their latest version
  prohibit                  [why-not] Shows which packages prevent the given package from being installed
  reinstall                  Uninstalls and reinstalls the given package names
  remove                    [reinstall] Removes a package from the require or require-dev
  repositories               [repos] Manages repositories
  require                    [r] Adds required packages to your composer.json and installs them
  run-script                 [run] Runs the scripts defined in composer.json
  search                     Searches for packages
```

Command Laravel (jika sudah ada project):

8. php artisan --version - Menampilkan versi Laravel

```
C:\laragon\www\modul9
λ php artisan --version
Laravel Framework 13.5.0

C:\laragon\www\modul9
λ
```

9. php artisan list - Menampilkan semua command Artisan Laravel

```
C:\laragon\www\modules>php artisan list
Laravel Framework 13.5.0

Usage:
  command [options] [arguments]

Options:
  -h, --help                Display help for the given command. When no command is given display help for the list command
  --silent                  Do not output any message
  -q, --quiet                Only errors are displayed. All other output is suppressed
  -V, --version              Display this application version
  --ansi|--no-ansi          Force (or disable --no-ansi) ANSI output
  -i, --no-interaction       Do not ask any interactive question
  --env[=ENV]               The environment the command should run under
  -v|vv|vvv, --verbose      Increase the verbosity of messages: 1 for normal output, 2 for more verbose output and 3 for debug

Available commands:
  about                      Display basic information about your application
  clear-compiled              Remove the compiled class file
  completion                 Dump the shell completion script
  down                        Start a new database CLI session
  docs                       Access the Laravel documentation
  down                        Put the application into maintenance / demo mode
  env                         Display the current framework environment
  help                       Display help for a command
  inspire                    Display an inspiring quote
  list                       List commands
  migrate                    Run the database migrations
  optimize                    Cache framework bootstrap, configuration, and metadata to increase performance
  pull                       Pulls the application logs
  reload                     Reload running services
  serve                      Serve the application on the PHP development server
  test                       Run the application tests
  tinker                     Interact with your application
  up                         Bring the application out of maintenance mode
  auth:clear-resets          Flush expired password reset tokens
  cache                      Flush the application cache
  cache:clear                Remove an item from the cache
  cache:forget               Prune stale cache tags from the cache (Redis only)
  cache:prune-stale-tags     List all registered private broadcast channels
  channel:list               Create a cache file for faster configuration loading
  config                     Remove the configuration cache file
  config:cache               Publish configuration files to your application
  config:clear               Display all of the values for a given configuration file or key
  db
```

10. php artisan route:list Menampilkan daftar route yang ada

```
C:\laragon\www\modul9
php artisan route:list

001 INFO / ..... storage:local ..... vendor:laravel/framework/src/Illuminate/Http/Middleware/EncryptCookies.php:10
001 INFO storage(path) ..... storage:local ..... vendor:laravel/framework/src/Illuminate/Http/Middleware/EncryptCookies.php:10
PUT storage(path) ..... storage:local ..... vendor:laravel/framework/src/Illuminate/Http/Middleware/EncryptCookies.php:10
001 INFO up ..... vendor:laravel/framework/src/Illuminate/Http/Middleware/EncryptCookies.php:10

Showing 14 routes

C:\laragon\www\modul9
|
```

11. php artisan migrate:status - Menampilkan status migrasi database

```
C:\laragon\www\modul9
λ php artisan migrate

INFO Preparing database.
A table has been migrated.
Creating migration table ..... 13.49ms DONE

INFO Running migrations.
Name
0001_01_01_000000_create_users_table ..... 30.28ms DONE
0001_01_01_000001_create_cache_table ..... 18.82ms DONE
0001_01_01_000002_create_jobs_table ..... 22.97ms DONE
